BERNIX.
furniture design

“Our desire is to bring the beauty of natural stone in furniture design.”

ABOUT US:

BERNIX furniture design is a young Slovenian furniture brand. It was established in 2017 by a married couple Ekaterina & Borut Bernik.

What we do:

We are specialized in creating exclusive, handcrafted furniture of premium quality, combining unique natural marble and modern design. We take inspiration for creating design of furniture from our love and passion to nature. Our desire is to bring the beauty of natural stone in furniture design.

Natural marble is a noble material used in architecture and sculpture since ancient Greece and Rome. Nowadays, it is again becoming more and more popular to use marble in architecture and design. Natural marble is more than a stone, it has great decorative value and beauty, that make products crafted using this stunning material outstanding and unique.

Inspired by the marble we decided to create new furniture brand of exclusive, handcrafted and modern furniture, crafted from unique, high quality natural materials. Our goal is to create products of premium quality, products that will illuminate any space with its beauty and charm.

We produce custom handcrafted products, that means that we can also make products according to customer's dimensions. Customer can provide his own measures for our products. For such a wish, please contact us on email info@bernix.si and we will provide special offer for you.

Arrange the space of your dream with us!

BERNIX furniture design

HANDCRAFTED PRODUCTS

All products are handcrafted in Slovenia by
experienced artisans with excellent knowledge
and many years of experience.

Upcoming new collection of coffee marble tables with double marble plates.

ABOUT PRODUCTION:

Each original BERNIX product is the result of the use of the modern design, best materials and premium quality. Production is carried out by artisans who are using the knowledge handed down from generation to generation combined with the most up to date techniques. All products are handcrafted in Slovenia.

Full production process from order placement takes 4-5 weeks. In case of using lacquering (special protection coverage of marble), production takes 6-7 weeks. The process of production includes choosing the best piece of marble with unique pattern according to the order from the customer, cutting and edge processing of the marble by the experienced artisans. Processing of marble is possible in 2 ways:

1. **Polishing** – marble processing, possible in glossy or mat;
2. **Lacquering** – special protection coverage for which is used the unique process of protection of marble against aggressive liquids and damaging. It gives additional protection to marble and is available in mat or glossy coverage. We recommend lacquering in case of regularly use of coffee tables for serving food and drinks (in restaurants, coffee bars, launges etc.)

After polishing/lacquering, marble tops are fixed on carefully hand built metal bases and packed in protective packages, specially designed to protect our products from damaging during delivery.

WHY OUR TABLES?

All Bernix coffee tables are handcrafted with special care, using best natural materials and premium quality, what make our products outstanding and exclusive.

Coffee table Cube - Nero Marquina

FIRST COLLECTION:

Our first collection of furniture is Collection of Coffee marble tables. The concept of the collection is combination of marble tops and metal bases.

The gorgeous marble tops are fixed on elegant metal bases specially designed to express lightness and support marble tops. Pure and minimalist design of coffee tables makes it easy to pair them with different seating elements. Each coffee table can be a single element or be a part of beautiful composition with other coffee tables. Bernix coffee tables will perfectly fit in a variety of design styles. Coffee tables can be used both for residential and public interior spaces.

For every product type you can choose from 7 different options of marble tops and 3 different options of metal bases, thus every product type has 21 different variants.
